PROFESSIONAL SUMMARY

B.Tech graduate in Computer Science (IoT) with hands-on experience in Python, machine learning, Generative AI, and LLM API integration. Developed practical AI applications, including an LLM guardrails system using Google Gemini API, and ML pipelines for speech emotion recognition and healthcare risk prediction. Familiar with prompt engineering, model evaluation, and building AI-powered applications. Seeking an entry-level Data Science and Generative AI role.

TECHNICAL SKILLS

Programming: Python, SQL

Data Science: Exploratory Data Analysis (EDA), Data Cleaning, Data Preprocessing, Feature Engineering, Statistics, Data Visualization

Machine Learning: Supervised Learning, Classification, Regression, Model Evaluation, Random Forest, SVM, Naive Bayes, KNN, Decision Trees

Deep Learning & CV: Neural Networks, Deep Learning Fundamentals, Computer Vision, Image Classification, CNN Concepts

NLP & LLMs: NLP, Large Language Models (LLMs), Prompt Engineering, Text Processing

Generative AI: Generative AI, Agentic AI,, Google Gemini, ChatGPT, Claude, RAG

Libraries & Tools: Pandas, NumPy, Scikit-learn, Matplotlib, Streamlit, Jupyter, Tkinter, GitHub,

Databases & BI: MySQL, SQL Server, Power BI, Microsoft Excel

Soft Skills: Communication, Teamwork, Problem-Solving

PROJECTS

Speech Emotion Recognition

Python, Librosa, NumPy, Scikit-learn, SpeechRecognition, Joblib, Matplotlib, Tkinter

- Extracted MFCC, Chroma STFT, and Mel-spectrogram features from the RAVDESS speech-emotion dataset using Librosa for multi-class emotion classification.
- Trained and compared Random Forest, Linear SVM, and Gaussian Naive Bayes classifiers on an 80/20 train-test split, selecting Random Forest for the final prediction pipeline.
- Deployed the model behind a Tkinter interface supporting real-time microphone and audio-file input, with integrated speech-to-text and spectrogram visualization.

Predictive Analytics for Patient Readmissions

Python, Pandas, NumPy, Scikit-learn, Joblib, PyODBC

- Engineered features from the GHW Heart Failure Readmission dataset, handling missing values and one-hot encoding categorical variables ahead of modeling.
- Trained a Random Forest Classifier (100 trees, 80/20 split) to predict 30-day patient readmission risk, evaluating performance with accuracy, precision, recall, and F1-score.
- Produced probability-based risk scores, persisted predictions to SQL Server, and built a Power BI dashboard to communicate model output to non-technical stakeholders.

LLM Guardrails: AI Security Application

Python, Google Gemini API, LLMs, Generative AI

- Implemented input guardrails to detect unsafe prompts and output guardrails to validate AI-generated responses.
- Integrated the Google Gemini API with environment variables for secure API-key management and built a web interface for the guarded system.

CERTIFICATIONS

- Data Analytics Essentials, Cisco Networking Academy (2026)
- Database and SQL, Infosys Springboard (2026)
- Introduction to Python Programming, Coursera (2023)

EDUCATION

B.Tech in Computer Science (IoT), Malla Reddy University, Hyderabad 2022 - 2026
CGPA: 8.59 / 10

Intermediate (MPC), Narayana Junior College, Telangana 2020 - 2022
Percentage: 91%

SSC, P.B.D.A.V Model School, Telangana 2020
CGPA: 9.5
